

An Essay on the Topic

‘IF I COULD INVENT SOMETHING NEW’

Invention opens the mind of several opportunities they all focus on improving human welfare or finding solutions to pressing issues around the world. Actually it's a useful feature that sprang from inventiveness with the goal of overcoming obstacles or improving current circumstances. As a matter of fact a world of imagination and discovery is essentially entered when one embarks on the journey of invention.

2.

If I could invent something new, it would be something that would make an impact in our society. I would invent a car that uses water as it fuel. As fossil fuels or gasoline, natural gas. I name this remarkable invention ‘the water Car.’ Cars play an important role in our everyday life. Cars have become the essential piece of our day to day conveyance. Going to work, doing groceries or just transporting from one place to another are examples of how we use this kind of transportation. In the place where I live public transportation is a bad choice to travel from one place to the other therefore the use of automobiles as a personal way to transport are very used. I dare to say we depend of this kind of transportation; we depend of its comfort and its privacy. In addition cars play an important role in our in our everyday life, the increase use of cars have resulted in the increase of air pollution.

3.

If I could invent something new, I would think about a global language translation tool that could translate across languages precisely and in real time, thereby reducing unnecessary and disturbing issues brought on by cultural difference undoubtedly, this innovation will remodel and enhance communication b/w several ethnic groups and of course promote flexible global communications thereby facilitating international relations. In education, this could lead to an invention that customizes teaching according to individual strengths and weakness and thus unlocks the full potential of each student's mind to increase capacity building for generations of students who can think critically and apply knowledge innovatively.

4

In conclusion, if I could invent something new, it would be an invention that goes beyond borders, touching lives and also having impact, leaving a legacy of innovation and development. Any form of invention whether scientific, technological or social are opportunities for making differences in the world today. However innovation isn't only about technology. This covers the social institutions and policies that Governs how societies organized. It could be fascinating to envisage an invention that promotes social justice and equality, potentially leading to dramatic changes ensuring that every single person has an equal opportunity to flourish and participate in their communities. The power of invention extends beyond simply solving issues to fostering a feeling of shared vision among people for a better tomorrow. I would embrace the challenge with a vision to create a more sustainable product.
