Class: JSS1

School: Miketery International College, Trans-Ekulu Enugu

### **IF I COULD INVENT SOMETHING NEW**

Invention is the act of bringing ideals to create something that did not exist before. Examples are compass, airplane, fire extinguisher, wheel, nail, thread, DNA, Paper etc.

I want to invent new things to improve human life and enhance technology. It makes life easy and simple. It makes changes in the society or community. It helps to maintain the environment. It goes a long way in the journey of inventors. It leads to the discovery of new things. It makes the society look enhanced. The area of human need I will invent is on TRANSPORTATION

Transportation is the process of moving from one place to another or the movement of goods and people from one place to another.

There are machines that are used for transportation they are as follows: Airplane, Lorry, Truck, Car, Automatic Bicycle, Skateboards, Train, Jet, Ferry, Boat, Canoe, Ship, Wheel borrow, Wooden rafts, Horse, Drawn carriage, Bus, Taxi, Tricycle, Motor bike, Cabin cruiser etc. There are 5 modes of transportation which are Air, Water, Land, Railway and Pipeline

Air transportation is the process of transporting people and goods through the air. Examples of air transportation vehicle include Jet, Helicopter, and Airplane.

Water transportation is the movement of goods and people through water. Examples are Ferry, Canoe, and Ship

Land transportation is the movement of people and goods from one place to another through land. Examples are Car, Motor bike, Tricycle.

Railway transportation is the transportation of people and goods through railway e.g. Train.

Pipeline transportation is the transportation of goods like Oil through pipes

There are also old and modern means of transportation

Old means of transportation to move from one place to another example are: Horses, Camel, Wooden rafts

Modern means of transportation is the current means of transportation examples of machines used for modern means of transportation are: Aeroplane, Cars like corolla, Lmbourgini, Limousine, Ferrari, Chevrolet, Lexus, minibus, Bus, cabin cruiser, train, space ships.

I would love to invent a steam boat. A steam boat is a boat that uses steam power. I am going to make with modern and advanced equipment as it also has the capacity to carry hundreds of passengers at a time

Both the rich and the poor can go anywhere through water easily and fast. Despite the invention of the steam boat some people will still choose the boat or canoe because they think it is an avenue for exercise due to the paddling of the boat or canoe. It is going to be affordable. It is going to be able to get people, goods or properties and services from one place to another. Interesting, walking has remained a valid means of transportation both in the past and in the present or modern time. The places where the steam boat technology will not penetrate deeply will still walk along distances or use boat or canoe. My advancement in technology will lead to the invention of steam boat. It will improve the speed of moving people, goods and services from one place to another within limited time. It all also increases mobility and lead to better world economy.

Finally my invention in this regard uplifts human life in transportation.
