School: The Brains Premier Schools (TBPS), Amuwo Odofin, Lagos State.

Class: Junior Secondary School 2.

If I Could Invent Something New

Invention! The first thing that comes to mind after hearing the word invention is innovation, making something or bringing ideas to reality. It can also be said that innovations come from laziness of not wanting to do something; well for me, it is just a method to make a process easier and faster.

First of all, if I could invent something new it would be a machine that can pick beans or separate it from the dirt or shafts and that would be “A Beans Picking Machine”. Of all machines to invent the only one I could think of is a Beans Picking Machine because of the sudden or immediate fatigue that knocks on the door just when my parents tell me to pick or separate beans from the dirt, shafts and stones. For the purpose of this essay, I would like to call the machine “Dave Beans Picker”.

The machine shall be a metallic device serving as a sieve and a picker with two layers.

After the picker sorts the beans from the shafts, the sieve separates any residual dirt from the picked beans.

Dave Beans Picker will make the process of picking beans stress free and faster. What do I mean by this? The time a person or someone uses to pick beans manually will be more than the time the machine will use to pick same quantity of beans.

Thirdly, it makes the process efficient which means that it will do more work, pick or separate more beans under a short period of time without wasting anyone's effort, power or strength instead, it will reserve the energy of so many people out there.

Dave Beans Picker will give you an assurance of perfect work, that is, no stone or any other substance will be left in the beans after separation, giving us a healthier food and reduction in some health issues.

In addendum, the machine will give room for division of labour, in the sense that when the machine is picking or separating the beans, you can do other things like washing the plate and other utensils going to be used to prepare it and also getting the ingredients for cooking ready.

In conclusion, in all of these, what is an invention if it does not have a huge advantage or impact to my country (Nigeria)? A lot of people eat beans in the country and love it.

Following the benefits stated in the earlier paragraphs, Dave Beans Picker invention will generate profit for me and also add economic value to people and the country. For instance, it will create job employment for those who will manufacture, control the machine at industrial level and also sell the machine. It will also contribute to the

country's Gross Domestic Product (GDP). There is really no demerit to this machine but, it will add to electricity consumption and will also not work without power.
