### IF I COULD INVENT SOMETHING NEW

According to Jacques Yves, water and air, the two essential fluids on which all life depends have become global garbage cans. Clean water and air are the essence of life and foundation of a healthy society. I am introducing the cleanair-water purifier which is a device invented to tackle two main environmental challenges which are air and water pollution. My invention helps to purify our indoor air and water which gives us healthy lives. Air pollution and contaminated water increase daily because of our day to day activities. We need to find a way to solve these environmental challenges and I am here to introduce to you the cleanair-water purifier which can help solve these environmental challenges by reducing air pollution and water contamination. I will give details about the functions, benefits and the impacts of the cleanair-water purifier.

Indoor air pollution is when dust, pollens and other air pollutants are found in indoor air and cause disease as a result of breathing in these. Water contamination on the other hand is when industrial, agricultural and other waste products are dumped into the water which later causes water borne illnesses. Now we have a new solution which is the cleanair-water purifier and it purifies both air and water and gives us good indoor air and drinking water.

The cleanair-water purifier helps to promote environmental health by purifying both air and water which promote human health. It reduces harmful substances in both air and water. It helps to improve air and it reduces lung cancer. It removes the contaminants by filtering the particles that have been captured including dust, pollen and bacteria.

In conclusion, cleanair-water purifier purifies both air and water, promoting good health. It also enhances indoor air quality and provides access to clean drinking water preventing us from getting cholera, typhoid fever, e.t.c. As we face environmental challenges and its risks, an invention like cleanair-water purifier is good for present and future use. Encouraging technologies like this improve health and environmental quality. Let us support the use and popularity of the cleanair-water purifier and enhance the quality of our lives.
