

Name: Oluwanifemi Ibitoye

Class: JSS1

School: Caleb International College, Magodo.

If I could invent something New

The earth is a beautiful place filled with wonders and mysteries. The varieties of life on Earth is what makes it so special. The fact that earth has life at all already makes it unique. The beauty of the earth is vast and diverse, encompassing natural wonders, ecosystem and the interplay of element. From majestic mountains and serene oceans to vibrant forests and delicate ecosystem, earth beauty lies in its richness and variety.

However, earth is threatened though the consequences of our own actions. Such as burning of fossils fuels, pollution and deforestation. One of the effects of this Global warming and climate change. Climate is the general weather condition of a place over a long period. Climate change refers to the long-term shifts in temperature and weather pattern. Climate change has some consequences like intense drought, water scarcity, severe fires rising sea levels, flooding, melting polar ice, catastrophic storms and declining biodiversity. Global warming refers to the rise in global temperature due mainly to the increasing concentration of greenhouse gases into the atmosphere. Majority of this effect is caused by burning of fossil fuels.

When fossil fuels are burned, they release large amount of carbon (IV)oxide a greenhouse gas into the air. This carbon (IV)oxide traps heat from the sun preventing the heat from deflecting back into space through the space. One can understand that human needs energy for day-to-day activities which is the reason for these fossils' fuels. But we need to take note of our action to make the world better instead of making it unbearable.

If I could invent something new, my invention would be simple to use. It is what I would love to describe as a Carbon Converter. A carbon converter will be able to extract carbon (IV) oxide from the atmosphere and channel it through a medium where it will be treated and react with certain chemicals to release energy in form of heat. The carbon converter will be able to reduce the presence of Carbon (IV)oxide in the atmosphere. My Carbon converter can be installed outdoor or in industries to extract carbon (IV)oxide from the atmosphere.

In conclusion, I believe the beauty of the earth can be restored if proper measures can be put in place and other innovations can be invented as well. My carbon converter should be able to minimize the effects of global warming. I strongly believe in a greener earth, and this can be totally achieved.
