

NAME: AYEWHE ALENOSI PRUDENCE
SCHOOL: SONIKA INTERNATIONAL SCHOOLS
CLASS: J.S.S 2
TOPIC: IF I COULD INVENT SOMETHING NEW

Invention is the act of creating or making something that has not been in existence before. The world at creation did not have any devices or equipment that would have helped the ancient people to make life easier, but as knowledge increased, people began to make equipment that helped solve many problems in society.

Some of the inventions are: airplanes, sewing machines, light bulbs, televisions, computers, and phones, to mention a few. These inventions have helped us tremendously, making life enjoyable.

There is a social problem in Africa, particularly in Nigeria, and this social problem is the absence of electricity. Some economies in Africa have experienced limited economic growth because of this particular problem, of course; no economy grows without a power supply to drive it. Consequently, many lives have been lost due to a lack of electricity, especially in Nigeria.

If I could invent something new, I would invent a **generator that uses water instead of fuel**. A generator is a device that converts chemical energy into electrical energy. Inventing a generator that uses water will definitely go a long way in solving the numerous problems caused by a lack of electricity in **Africa**, particularly in Nigeria. This generator that doesn't require fuel to function will definitely lessen the burden of refueling generator and enable more people to have access to electricity, which will improve the economy and raise the standard of living for people.

Though it is important to mount pressure on the government to generate power that is enough for various activities in Africa, despite the various complaints by the masses, the government of Nigeria in particular has not been able to generate enough power.

If I am able to invent a generator that uses water, it will definitely bring fame to me as a person within and outside the country. Countries will start talking about my invention and the inventor. It is as good as writing my name on marbles because people will now talk about me and what I have invented. It will also bring financial benefit because this device will definitely be produced and sold within and outside the country.

Nigeria, by extension, Africa, has not been active in producing technological tools; we have always been consumers of technologies. With my invention of a generator that uses water, Nigeria will become a country to be recommended in terms of technology.

Inventing a generator that uses water as a student of **SONIKA INTERNATIONAL SCHOOLS** will encourage the pupils/students of **SONIKA INTERNATIONAL SCHOOLS** to think outside the box in terms of creating new things. This will therefore bring about many other inventions from my school and bring comfort to people in our surroundings and to Africa at large.
