

NAME: LINUS EXCEL UDOCHUKWU
SCHOOL: SONIKA INTERNATIONAL SCHOOLS
CLASS: J.S.S 3
TOPIC: IF I COULD INVENT SOMETHING NEW

Invention entails having special knowledge obtained by observation, testing of facts, and putting what is learned into practice; it is the creation of something new that will be of major use to humans. Science and technology are the tools that help invent different equipment. Let us say that without science, we are not going anywhere, and without technology, we will be living like people from the prehistoric period. In a nutshell, science and technology have helped us to invent useful things.

I will like to invent a gun, not just any type of gun but a **BIOMETRIC TRANSFORMER GUN (BTG)**. You might be wondering what that is. Biometrics are biological measurements of physical characteristics that can be used to identify individuals. This is a very powerful weapon that only trained men (soldiers) will be able to use.

This weapon is going to be made of ninety percent titanium, two percent aluminum, two percent zinc, three percent iron, one percent tin, and two percent gold. Why I called it a biometric is because it is a technical gun encrypted to one's biometric via one's finger print. During action, it can only be stopped if, within thirty seconds, the one in which the biometric is encrypted holds the gun again; the bomb in the gun automatically stops.

One interesting thing about this gun is its ability to change its design into something unimaginable. The transformer in this gun can cause it to transform into a shield when necessary and prevent a bullet from hitting a person who handles it. Also, this gun will have a camera that is faster than the speed of light in three places: the left side, the front side, and the right side. When under attack from the three angles, it will turn into a metallic force shield, a medium-sized robot, a car, a ship, and a helicopter, depending on the type of gun the operator wants at a particular time. This is a weapon of protection and mass destruction as well.

I will feel like a hero when I succeed with my invention because I will be proud of myself because this special gun will be able to save my country from both internal and external wars.

In conclusion, science is the pursuit and application of knowledge and understanding of the natural world and the social world following a systematic methodology based on evidence. To succeed with my invention, I need to think carefully, make observations, form questions, hypothesize, make predictions, and arrive at a conclusion. Science covers a lot of humans's activities. Science will continue to be relevant to human existence.

Boys and girls must embrace science and its inventions for the improvement of the human world and existence. My invention will make me famous and improve Nigeria's military to be the most dreadful in the world.
