**TOPIC: IF I COULD INVENT SOMETHING NEW**

An invention typically means something that is being invented or created. An invention is actually an incredible achievement in life, but it requires someone who has the ability, skills, and knowledge to actualize it.

If I am to invent something new, it would be **A SPY BIRD**. The spy bird, when invented, will be used to detect or spy on criminals at close or distant range. It will also be used in war to see what the enemies are planning.

The spy bird will actually be like a hawk, but not exactly. It will weigh 6 kg, and its height will be 11 m. It will be made up of aluminum, iron, gold, and titanium, and it will be brownish in color.

The spy bird will be made to fly, and how it spies will be mysterious. You will have to project what you want this bird to do using a computer and a Wi-Fi made for it. Once the Wi-Fi is on, the bird is activated, and the Wi-Fi will be located at the bottom of the bird.

Using the Wi-Fi, you will see anywhere this bird goes with the use of a computer and its passwords. You will also know what your enemies are planning, especially when there is impending danger. It will be made to record everything through its sight because its eyes are like cameras and they are audio-visual.

You cannot steal this bird because it has a finger print for its owner, and it consists of three parts of the body: the leg, hand, and face. The person who programs this bird can program it to shoot you if an attempt is made by anyone to steal it. The spy bird can turn into a normal robot with its head, leg, hand, and body, and when it is in this form, you can't imagine what it can do. It can transform one hand into a shield and the other into a sword. The spy bird can also be powered by sunlight.

The spy bird will be designed to shoot from its mouth in three ways and in three parts. One is like a grenade, the other is like a bomb (very explosive), and the last is like a missile, and these three will shoot at one person or a target enemy; thus, this will be very explosive and dangerous.

The spy bird cannot be killed because it will have a force field guiding it; thus, it will be very protective, and that is why it will be an asset of inestimable value to anyone that would own it if I succeed in my invention.

With the invention of a spy bird, the rate of crime will be drastically reduced, and there will also be respect for people's fundamental human rights, which are often violated in times of war. The spy bird will be a powerful bird that will perform a lot of protective functions for Nigeria and the world at large.
