

If I could invent something new

Transportation : invent safer,more efficient or

Sustainable vehicle, infrastructure or mobility solutions .

Transportation is the means of traveling from one place to another. Nowadays, without transportation, everything would be stagnant and there will be no movement of people, goods and services. Therefore, transportation is the key to all aspects of economy and that is why I chose to invent on it. So, if I am giving the opportunity,I would like to create a vehicle called flying car.

Firstly,this flying car will look like an helicopter.it is going to have a very big capacity of carrying more passengers more than the land vehicles with the driver and the assistant sitted Infront of it.it will also be very large to enable the passengers to be very comfortable in it.it is also going to have high speed rate to enable it fly even faster than the helicopter.Inside the flying car, it's going to have Restroom and medical attendant Incase of emergency.Parachute will be made available too.

Secondly,this flying car is going to be safer compared to other means of transportation on land. There will be no risk of accident since there's no traffic jams or congestion of other vehicles struggling to move on one lane.The availability of parachute will also reduce the risk of accident because ones there's emergency,the passengers fly down with their parachute,and before then, detector will alert the driver and the passengers before the danger occurs.this will prevent the risk of having accident,then with these safety of all the passengers are assured .

However,this flying car can be able to transport people quickly and efficiently over long distances without traffic unlike land vehicles that can stay on a traffic like five,ten hours delaying your journey

Furthermore, with the invitation of this kind of vehicle, people can easily travel to remote areas or hard to reach areas. Thus bring about the development of these areas.

In conclusion this my invention will affect people's lives positively, because it is going to create job opportunities for the youths since a new industry would be introduced and also reduce the stress of traveling by road.
