If I could INVENT SOMETHING NEW. The beginning of an invention begins always from dreaming about it and I personally have many dreams. If I could invent something new, it will be something that would make an impact in our society and people.

I could invent a car which uses water directly as its fuel. The car will be mechanically structured that all the components will be refined to suit the water for its fuel. It will be called "Water Car".

I will give the reasons for the invention. Cars play an important role in our everyday life. It has become the essential piece of our day to day conveyances; going to work, transportation from one place to another. It is very expensive for any car to use fuel for all these purposes. This has led to suffering of people in the society. The structured "Water Car" will make life more enjoyable for the people. It will reduce burden of people transporting their goods from one place to another and going to their work and respective places.

Again car plays an important role in our everyday life, the increase use of cars using fuel have resulted in the increase of air pollution. This consequently results in the increase of respiratory problem as well as the lost of healthy ecosystem. The importance of air pollution is high throughout the world and people try to find a way to reduce it. In this manner a "Water Car" could be a solution.

Moreover, the cost of fuel is very expensive when people spend much money to buy fuel for one thing or another and especially for car owners it brings a lot of suffering to our people. The money people will use for other important things are wasted in buying fuel and transportation. This my new invention of "Water Car" will be a solution to these problems.

However, when this new invention is done many people will have access to this water car for all their activities. This will lessen the burden of parents in feeding their children. Food will become cheaper for "Dick and Harry" because sellers will no more complain of high cost of transportation which lead them to increase of food stuffs.

Parents who have their children in schools will now save enough money to train their children to any level of education they want.

This "Water Car" will reduce accident or damage of cars because the engine will be cool and the engine will not be affected by over heat which normally damages the engine.

Finally, it will be affordable to many people who will use it for their privacy and personal engagements for their safety and safety of the society.
