

NAME: AGORE OGHENEMARO JOAN
SCHOOL: SONIKA INTERNATIONAL SCHOOLS
CLASS: J.S.S 1
TOPIC: IF I COULD INVENT SOMETHING NEW

An invention is something you create using scientific knowledge to help society. The upsurge of strange diseases like the Ebola virus, cancer, Lassa fever, monkey pox, etc. has ravaged humanity in recent times. In order to stop the spread of these diseases, I would definitely like to be an inventor of cancer-curing drugs.

We all know that cancer has no cure, as there are drugs that could only weaken it, but it doesn't stay weakened for long. It is a disease in which abnormal cells divide uncontrollably and destroy body tissue.

It is important that a drug be made to cure cancer and save cancer patients from the pain they undergo before dying. From the research I have done, I know that over a thousand people per year die of this killer disease. The survival rate of people that have cancer is seven percent, which is very low; hence, it is important that people go for cancer screening to detect it on time because it is very depressing to see that people die every day due to this killer disease. So, my invention will help society at large reduce the rate of death per year. It will also help people to erase the fear of dying of a disease like cancer.

If I am able to invent a drug for cancer to be cured, it will not only benefit me and my family but also Nigeria and the world at large. Nigeria will become popular, and people from far and near will come to Nigeria to buy the drug; this way, it will help Nigeria increase its foreign reserves. With the money gotten, the government of Nigeria will be able to provide its citizens with basic amenities such as clean water, good roads, free education, and most especially, a reduction in inflation.

Also, if I am able to invent a cure for cancer, I will feel blessed. My name will ring a bell all over the world, on both social media platforms and other platforms, as the first person to invent a cure for cancer. It will make my name appear in the hall of fame with other inventors all over the world. It will also motivate students to dream big and work towards achieving them. Additionally, I am presently looking forward to achieving my dream of inventing a cure for cancer by working on my grades, focusing more on mathematics, basic science, and basic technology now as a junior student. Furthermore, I will prioritize physics, chemistry, biology, etc. during my senior secondary education because they are the basic science subjects I need to perfect as a science student to secure my dream.

In conclusion, I would like to invent a cure for cancer, as it will lighten the burden on both the patients and their families, both financially and emotionally. It will also set Nigeria on a high pedestal in the health sector worldwide.
