

NAME: NWOSU, CHIMFURUMNANYA FAVOUR

SCHOOL: VICTORIA HIGH SCHOOL, IJESHATEDO, SURULERE, LAGOS.

CLASS: JSS 3

IF I COULD INVENT SOMETHING NEW: "REVITACORE"

Imagine a world where death, especially premature death could be reversed. Well, I can say that I have imagined that world times without number. There are so many world problems calling for solutions. But if I could invent something new, it will be solution to this problem called "DEATH". There is a popular quote by Denis Markell which says "Only for death is there no solution". But I say, "untimely death doesn't have to be without a solution". According to World Death Clock- Medindia " It is estimated that there are over 56 million deaths occurring annually which translates to approximately 4.6 million deaths monthly, 150 thousand deaths daily, 6,000 every hour, 106 every minute and nearly 2 deaths every second". Death is a universal experience that leaves a void in the hearts of those left behind, altering lives irrevocably. I know this pain intimately, having lost my father at a very tender age. His absence has shaped my life thus far and continues to influence it in ways I could never had imagined. The emotional and psychological impact of losing a loved one so early is profound. It manifests in a sense of insecurity, longing and relentless question " what if"? This personal loss has fueled my desire to find a solution that could mitigate such profound sorrow, pain trauma and grief.

This is where the concept of "RevitaCore" comes to play. "RevitaCore" will be a revolutionary device capable of bringing people back to life and rectifying the underlying cause of their demise especially for people below life expectancy. This technology will delve deep into cellular and molecular levels, repairing damage, restoring function and ensuring that the reasons behind the death are fully addressed, thus granting a new lease on life.

The impact of "RevitaCore" will be monumental. It would offer babies, children, spouses, and families a second chance with their loved ones, reducing the heartbreak and disruption caused by untimely death. Parents could watch their children grow, partners could continue their journeys together and dreams left unfulfilled could finally be realized. Moreover, "RevitaCore" will alleviate the psychological burden associated with grief, reducing the long time emotional and mental health issues that arise from such losses.

In my own life having a "RevitaCore" could have meant growing up with my father's guidance support and love. It could have meant a more stable and secure childhood filled with the invaluable experiences and lessons a parent can provide. While this invention remains a dream, the motivation behind it is deeply rooted in my personal experience. "RevitaCore" represents hope, healing, and the possibility of re-writing the narrative of loss.
