Topic: If I Could Invent Something New

The world is like a recycle bin. It's a place where people use up things and give them away. Some even lose interest in it, so I was thinking if I could invent something new and special. Maybe, it would blow some minds, or it would just be trash for people. This kept me curious for a while. Some people say, if you invent something new, you could win prizes like the noble peace prize.

If I could invent something new, I would make sure it would be really valuable for so many people across the world. But what I want to set for as a goal is for me to make millions and billions of money. It would make the world's smile into an even bigger one. It would change the looks on everyone's face. Like the android phone created by Andy Rubin, Rich Miner, and Nick Sears. When the android phone was invented, it was really profitable.

If I had a chance to invent something new, it would be a good means of transportation. Transportation by land has been a huge problem nowadays. So, I would invent a flying car. Presently, transportation on road is developing problems like traffics. Sometimes traffics take up to three to four hours of people time and will make them get to their destination late. But with a vehicle that goes on air, you can get to your destination faster and easier without any traffic. It will be fun too. It's really delightful for people to chant your name for a good purpose. In the past people travel only on a horse or just on foot. The number of traffic jams has increased with the use of great number of cars on the road. Basically, that's why I would like to invent a flying car.

Firstly, my invention would help to decrease driver's stress caused by traffic jam. As statistics shows, traffic jams are increasing in big cities as well as small ones especially during business days when everyone is trying to get to their work place and unexpectedly encounter a massive traffic jam. Most people would prefer to drive flying cars instead of ordinary cars. The combination of ordinary and flying cars would definitely help to get rid of traffic jam.

Secondly, because of my incredible invention, there will be decrease in car accidents. Bad roads can destroy your car and it will be very costly to fix. Also construction sites can delay you. In my own opinion there is only one solution to these problems. So I say flying cars should be available.

In conclusion, I would like to change this stressful means of transportation as this invention would be very beneficial for people to avoid stress thereby improving quality of life and travelling would also be enjoyable.

That's why I would prefer to create a smart and wonderful invention like a flying car.
