

“If I could Invent Something New”

I have an idea of building an automatic self-driving car and a multi-purpose robot. These would help millions of people around the world. This invention may cost a lot but for the benefit of the world.

The automatic car is very helpful because it can be used for emergencies like rushing unconscious, badly injured people to the hospitals. It can also be used for taking people to their various destinations easily therefore, saving people the stress of driving. The car will also be a rechargeable car. It will also be solar-powered.

The car is capable of sensing its environment and operating without human involvement. A human passenger is not required to take control of the vehicle at any time, nor is a human passenger required to be present in the vehicle at all.

It uses a collection of sensors to detect nearby cars, pedestrians, curbs and signs. The name automatic self-driving car can also be called “Autonomous car”. These cars can be seen in places like Los Angeles, San Francisco and in, among other cities.

The robot is very helpful as it can be used at home by families to do many tasks at home. It is also used by people of different occupations to perform many activities in their businesses. A multipurpose robot eliminates the need to have multiple workstations with several workers, which can quickly become cramped and inefficient.

Multipurpose industrial robots are capable of automating several manufacturing applications. These robots can be used in manufacturing, assembly and packing, transport, earth and space exploration, surgery, weaponry, laboratory research, and mass production of consumer and industrial goods.

By way of conclusion, I hope my inventions would be very useful to mankind as they keep relieving people from stress.
