

Name: Michael Omeni
Class: JSS2
School: SAINT RITA COLLEGE
Topic: If I could invent something new

If I were to invent something new, it would be a time machine. The idea of traveling through time has always fascinated me and I believe that such a machine would revolutionize our understanding of history and the world around us.

Imagine being able to travel back in time to witness historic events as they happened, or to meet famous figures from the past. With a time machine, we could gain a better understanding of our world and how it has evolved over time. We could witness the birth of civilization, the rise and fall of empires, and the development of technologies that have changed the course of history.

A time machine could also have practical applications in our modern world. It could be used to explore the future, allowing us to see how our actions today will impact the world tomorrow. It could also be used to solve mysteries and answer questions that have long eluded us such as the true origins of humanity or the fate of lost civilizations.

A time machine would also come with its own set of ethical considerations. The ability to travel through time could be used for personal gain or even trying to prevent an event from occurring. It would be important to establish rules and regulations for the use of such a powerful device to ensure that it is used responsibly and for the betterment of humanity.

Despite the challenges and ethical considerations, I believe that a time machine would be a tremendous invention that would change the course of human history. It would allow us to see the world in a new light and gain a better understanding of our place in the universe. I can only hope that such a machine will one day become a reality to humanity.
