

## **Essay Topic: If I could invent something New**

Every Sports has it fault one way or the other, football as a game has lost its uniqueness and passion due to poor officiating, therefore an invention of a robotic Machine that will enable officiating and enhance, both in field play and training of player off the field.

It would be something that would make impact in football. I will invent a Robotic referee and a Robot Machine that will organize the football Match which is been played by human in the pitch. If I will event it, first of all I will make the purpose of Robot on the Pitch, Either a linesman, assistant referee or the main referee that Controls the game and blow the match peacefully without the players fighting or arguing. I will like to invent a Robot machine that trains keeper by using force to shoot the ball to different directions that the keeper will try to catch the ball during training, So that he or she will be developed while playing the Match. So that during training the Coach will focus on the players while the Robot will take care of the keeper. Like the keeper will be in his/her post and the Robot will play the ball from either, 24inche, 28 inches, 29 inches and 30 inches from the goal post and the Keeper will dive to the direction where the ball goes to and Catches it. And make training more easy for the players, also makes teaching easy for the Coaches. So when players are being trained the match becomes tough for the opponent to control. Like when they try to score a goal but the keeper catches it because the impact taken in by the Robot. That makes the keeper extremely better than before because the thing the Robot teaches the goal keeper is better than the one the Coach teaches him depending on the way the robot is being programmed.
