CLASS: UB2

TOPIC: IF I COULD INVENT SOMETHING NEW

I have looked into the impact of technology in our country today and I have been wanting to invent something and I have been wanting to invent something and I have finally gotten a chance or opportunity to explain the work, its function and impact in the country.

Before I proceed, one may ask what is an invention? Invention can be defined as the act of building something or creating something that is not in existence and does not exist. Who is an inventor? An inventor is a person who has invented something or whose job is inventing or creating something.

The name of this invention is called “**THE CONVENTIONAL RAIN MAKER**”. The rain maker controls the rainfall in a particular place and send it to an area where it is needed. It makes use of a moisture and humidity sensor to detect when the land or area is in need of water. When the sensor detects it, it creates a rain called the “**CONVENTIONAL RAINFALL**” Over the land or area.

Conventional rainfall that occurs in one region or area but does not occur in the other part of the region or area but does not occur in the other part of the region or area at the same time. They are like drones that sucks in the water from the cloud and distributes it to the area or region. The name of the drone used to distribute water over the land or area is called **ISRA2.20**. After the soil has been moisturized, it sends out signals to the remote computer (database computer) then the water stops flowing from the drone.

Also, this invention will help a lot in the agricultural sector and reduce stress on farmers. The farmers will not have to wake up in the morning to water their plants or Farmlands, all they have to do is just to weed and plant on their farmland. Some of these farmers are old and may not have the strength to stand and begin to water while some of them have works to do so it can also save their time and their energy.

In conclusion, the absence of this device in the country has got about the reduction in the yield of agricultural products and fields. But this will be a solution to their problem. It will wonderful if I was able to accomplish this invention, but as the result of lack of resources, I am not able to invent this but in the future, if given sufficient resources, I will be able invent this. It will be fun and easy if this work was to be in existence. Why, is because people will live their life peacefully in the world and if you wake up in the morning at least, you will have that knowledge of what to eat and you will also mind that you do not need to wake up and water your plants, just have it mind, something is already in charge of this work. All thanks to this invention if it was really in existence
