

Name: Amos Aderayo

Class: JSS 2

School: French Village International College, Ajara, Badagry.

IF I COULD INVENT SOMETHING NEW

It is an accepted fact that necessity is the mother of all inventions. I personally would like to invent something that will be of benefit to my locality, state, country, and the world at large.

Inventions are done to make things easier and more convenient for people. So I'm sure that this invention will not only be of benefit to myself alone.

My invention is going to be different from any other invention because it is quite unique. I am thinking of inventing a technological device that can predict the future using high-level language. High-level language is a programming language written in human language for us to be able to read them.

It is an accepted fact that the technology we are using in this generation is going to be outdated to the technology of the upcoming generation. There is a general consensus on this by expert scientists, I will make sure my invention is always upgraded anytime it starts to get outdated.

Have you ever thought of the future? I mean the very near future? Of course everyone has. Every educated person that has deep knowledge in science and technology knows that not every device that is invented will last forever. For example, the telephone when it was first invented was a groundbreaking discovery but now it has been replaced by mobile phones because the latter has way more capabilities.

I strongly believe that as long as I do more research and continue to upgrade this device, it is going to make the world a better place and never get outdated due to its continuous upgrading.

In conclusion, this future predicting machine is going to be one of a kind because it will make people more hardworking, reduce laziness, because one day artificial intelligence might take over the world and it will have huge negative impacts
