**Class:** JSS 2A

## **ESSAY WRITING**

**Topic:** “If I Could Invent Something New”

If I could invent something new, I would love to invent a hydro generator that with water, it can work like any other normal generator. The name of this generator is derived from the fact that it uses water as fuel. Haven observed the high cost of Premium Moto Spirit (PMS) popularly known as fuel, and the availability of water and its cheap nature, I feel that water can serve as substitute to fuel.

The term “invention”, is a process of bringing into existence, something that no one has ever talked about or done before.

Scientist while searching for a means to eradicate carbon monoxide from the environment, came up with the ideas of constructing a hydro car but I have never heard of a hydrogenerator, so I wish to invent one. Carbon monoxide is a highly poisonous colourless, odourless and tasteless gas. It is very flammable and mixes very well with air, easily forming explosives mixtures. Carbon monoxide should not be allowed to thrive in the atmosphere as it poses a great danger to the growth, development and healthy living of plants, animals and humans and it is extremely dangerous to our environment at large.

Also, through the use of the internet, I came across a piece of information whereby three students lost their lives due to carbon monoxide which through the use of a generator popularly known as “I better pass my neighbor” entered their rooms, penetrated through their nostrils, blocked their lungs stopping the flow of air and they were eventually found dead by the next morning. This sad story shows how dangerous carbon monoxide can be and to stop a re-occurrence of such situation, I intend to invent the hydrogenerator.

In conclusion, the use of hydro generator can help in reducing carbon monoxide emission which leads to so much problems in the atmosphere like, depletion of the ozone layer (ie. Gradual reduction of the chemical called ozone found inside the ozone layer). With this invention I intend in joining the scientists in making our environment not only safer and healthier to live in but also carbon monoxide free to improve health conditions of living things found in the ecosystem and making the earth less prone to total destruction of the ozone layer thereby absolutely preventing global warming, reducing cost of buying fuel and utilizing the money in useful things that brings about profitable returns.
