The beginning of an invention always start with dreaming about it, and personally I have many dreams.

Generally speaking, if I could invent something new, It would be something that will help the society. I would invent a car which uses water to power and moves in water.

First of all, cars play an important role in our lives. Cars have become the essential piece of our day to day activities. If going to work, doing school runs, buying groceries or moving from one state to another, we need cars .Water cars can reduce traffic jams because oceans or seas have large space of land.

Secondly, the increase use of premium motor spirit (PMS) cars have resulted in the increase of air pollution. This consequently results in the increase of respiratory difficulty. The water car would prevent air pollution that makes the air purer.

Lastly, the water cars would be an important innovation difficult to resist, this is due to the fact that water is deeply cheaper than fuel. Water cars may be more expensive, but it will be an important investment for our life, it will be easy to maintain and cheap to travel.

To sum it up, I strongly believe this invention will be a better way of transformation, this will bring a lot of benefits to the society and to the country at large.

Transportation will be cheaper, easy and better. It will cause reduction of costs of goods in the market.
