

NAME: OSENI MICHAEL AYODELE

CLASS: YEAR 9

SCHOOL: PLATFORM COLLEGE

### IF I COULD INVENT SOMETHING NEW

If I could invent anything, I would invent a technical machine that can automatically pick up litter and make the air cleaner, fresher and less polluted. This idea is being inspired by the global issues that we are facing with keeping the earth safe and having full responsibility for it.

Our generation is now battling global warming issues which is predominantly killing all kinds of animals and species who are living in very extreme climate condition such as snow and ice. Our Intensive littering has caused our oceans and seas to be greatly violated. Littering is gradually brutally slaughtering our seas and oceans life. Our sea life extinction has risen by 20% in the last few years which suggests the possibility of not having oceans in the nearest future.

The invention will therefore assist in cleaning and purifying the damage that has already been done so we can therefore make a sustainable environment for next generation to come. It is independently run by battery or solar energy to prevent use of fossil fuels and dangerous chemicals. This new technology can retail at a very low price meaning that this will be very easy to get and will be so useful for local and worldwide communities. It is made with lots of substantial materials to extend its sturdiness. With the very help of this great appliance, the nation can multiply the development of trees, and other green pasture. It will also reduce the utilization of cars and other method of transportation. So we must make our hair cleaner and our earth greener.

This machine will reduce the use of chemical based cleaning agents that usually cause significant risk to the health and safety of works. These chemicals can cause respiratory problems, skin irritation and allergic reactions. This machine I would like to invent would eliminate or minimize the use of such chemicals, thereby reducing the risk of harmful exposure. In addition to this, this machine operates at a lower noise level, making the world environment more pleasant and reducing the risk of noise induced hearing loss. By prioritizing safety and health, businesses can boost employee morale and productivity.

The advantages of this environmental friendly cleaning machine extend beyond minimizing environmental impact. By embracing these technologies, businesses can prioritize the health and safety of their workforce, increase efficiency, reduce costs, and cultivate a positive brand image. As sustainability continues to shape the industrial landscape, investing in eco-friendly cleaning machine is not only a responsible choice but

also a strategic one. By doing so, industries can contribute to a cleaner, healthier planet while reaping the numerous benefits that these machines offer.

In addition, this invention will greatly reduce pollution and dirt's around the area. It will also help in making the community and environment suitable for living. In conclusion, this invention will impact the society so greatly because it will help reduce the stress of cleaners all around the globe. It will also help in reducing bad odors and diseases to the people and with this we can make a great change. Thank you.
