ESSAY WRITING

Topic: “If I Could Invent Something New”

If I had a chance to invent something new which would be very beneficial for mankind, it would be a flying car that uses water instead of fuel. In the past, people travelled only on horses, donkeys, animals or just on foot. After car was invented, it changed everything radically. People started to use more than any other vehicle. Nowadays cars are the most common means of transportation. The number of traffic jam has increased with the use of great numbers of cars. Basically, that is why I will like to invent flying car that uses water instead of fuel.

First, my invention would help to decrease drivers’ stress caused by traffic jam, as statistics show traffic jams are increasing in big cities as well as in rural communities especially during business hours when almost everyone is in a hurry trying to get to his/her work place and surprisingly meets a massive traffic jam. This will make some people to prefer driving a flying cars instead of ordinary cars. The combination of ordinary, flying cars, and the cars that use water instead of fuel, definitely would help to get rid of traffic and make movement faster on the road and on air.

Secondly, as a result of this invention, there would be a decrease on road accident. Sometimes people do not realize that they violate the laws by breaking the traffic rules and regulations because of a lot of reasons. They do not obey the laws because they are in a hurry to get to their jobs, work places or drop their children in school. Commuters also encounter traffic jam because of problems like road constructions, narrow streets, crowds of people, bad roads, accidents, flood, etc. In my opinion there is only one solution to these problems. Water powered flying car!!! Journeys are made easier, faster and more comfortable.

Furthermore, my invention would play an important role in our everyday life as the increased use of cars has resulted in the increase of air pollution. This consequently results in the increase of respiratory system diseases as well as the loss of healthy ecosystems. The frequent and continual use of fuel causes air pollution in the world and as well as diseases to human beings. In this manner a car that uses water instead of fuel (let us call it “water car”) would be a harbinger of this important trend and give the world in general a clean and fresh atmosphere.

Finally, it would be fun. We have often met the concept of flying cars that use water in science or Hollywood fictional films. Obviously, it is interesting and I would like to try it myself.

In conclusion, I would like to change this stressful atmosphere and fiction world to reality. Actually, people waste time on the road due to traffic jam instead of that, they can spend more time with their families or relatives. This invention would help people avoid stress and enjoy travelling.
