

ESSAY COMPETITION

NAME: EBENEZER E. PROSPER

CLASS: JSS3

SCHOOL: PLATFORM COLLEGE

TOPIC: IF I COULD INVENT SOMETHING NEW

To invent is an act of creating something new, it is also to come up with an idea, plan, explanation, theory or principle after a mental effort.

Firstly IF I COULD INVENT SOMETHING NEW, i will invent a robot with all means of transportation, this simply means that this robot would be able to transform into any transportation device e.g. cars, ships, airplane, helicopter, bus, motorcycle and even a space ship The materials I will use in making the robot are: windings, laminations, silicon steel, cores, amorphous metal, ferrite ceramics, conservator tank, bushing and terminals radiator and cooling tubes.

Secondly, i will make the robot as fast as a palgrine falcon as or even faster than it. It will also be strong as combining fifty hefty elephant together. In recharging the robot I will make a charging point at the back so when the battery is low I will be able to charge it. I will also make a button at the side of the robot to have a complete control over it. i will name the robot "AI TAUR" (Transformer Automated Universal Robot), I will also sell this robot about 50 billion dollars and i believe that people would want to have this invention in their homes and that would also make me and my parent proud of what I have done and people will also like to visit or know who i am and i know that with this invention, i will be one of the richest man on earth without brag.

Furthermore, i will make the "AI TAUR" robot device communicable, so that you can be able to communicate with your robot, that is, when controlling the robot, you can tell your direction and it will take you to wherever you are going to. Whatever you want the robot to do for you, it will do it. The robot will be so amazing that when it transforms to a train it doesn't use the usual rail way, it will just float on air like a bird while on motion.

With this invention of mine, life will be easy as falling off a log and there will no longer be traffic chaos in Nigeria because there will not be any form of accidents on road. I believe that this my invention will reduce the number of death in our country because there will less movement of normal circular and conventional vehicle on the road and i know that this will make my country Nigeria better country to live in.

Lastly, my robot device AI TAUR as a means of transportation will make Nigeria a better place for us to live in. I am certain my invention will be one of the best in the world, as everyone from different continents of the world both home and abroad will like to buy my ideas and visit our country because of my invention.
