

NAME: OLATERU DANIEL KOREDE

SCHOOL: CALEB INTERNATIONAL COLLEGE

CLASS: JSS 1

IF I COULD INVENT SOMETHING NEW.

If I could invent something new, I would create a device that shows empathy and respect to the world and our generation, the recent happening in our world shows that the amount of pollution is unbearable and the water pollution affected eight hundred and nineteen animals species, it affected fifty-nine percent of whales, thirty-six percent of Seals and forty percent of seabirds.

The machine will be a cleaning machine called a clean bot, it will be able to automatically pick up litters and make the air cleaner and less polluted. This idea is inspired by the global issues that the world is facing, our intensive littering has caused our oceans and seas to heavily polluted, littering is slowly, gradually and brutally slaughtering our sea life and extinction has been risen by twenty percent in the last ten years which suggest the possibility of not having sea life in the nearest future.

The machine therefore assists in cleaning and purifying the damages that have been done, so we can therefore make a sustainable environment for the next generation to come. It will independently run by solar or battery, to prevent the use of fossil fuels and harmful chemicals. The new technology can be sold at a low price meaning it is easy to buy and beneficial for local and worldwide communities. It is made with substantial materials to promote its sturdiness.

With the help of this appliance, we will be able to multiply the growth of trees, plants and green grass. It will also help to increase the use of recycling. Scientists have proven that we have approximately used ten to twelve years to change our earth. We must make our air cleaner and our earth greener so as to make a positive difference.

This robot will be able to help us with our daily tasks and also be able to translate languages in record time to improve our way of communication, it will be available all over the world and also on apps like Jumia, Konga, Prime, Amazon and so on. Imagine a world with no sea life with all the sea animals dead because of our acts and litters filling up in our oceans.

To prevent this I will create a clean bot with a state-of-the-technology, it will be able to recycle and identify trash and litter from different things. I will make sure it will be able to navigate its way through rooms and environments. It will be able to embrace the new era of smart homes and also be controlled by voice command. It will also be known for its durability and I will make sure it is designed to be long-lasting and durable.

My primary objective is to make sure our environments are always clean and would invent a clean bot and make sure our environment is always free from pollution to prevent all forms of sea life from the dangers of pollution.
