

**NAME : HASSAN FARUQ JOMILOJU**

**SCHOOL NAME : YEWA GRAMMAR SCHOOL, IKORODU.**

**The beginning of an invention begins always dreaming about it, and personality I have many dreams. Generally speaking, if I could invent something new, it would be something that would make an impact in our nation, I would invent a car which uses directly water as its fuel ( Let call it “water car”) instead of fossil oil such as gasoline or natural gas. And when there is fire on the roof of the car, you can use the water tank to extinguish the fire. I explain below some argument to defend this stance; first of all, car plays an important role in our nation. Cars have become the essential piece of our day - to – day conveyance going to work, doing groceries or just transporting from one place to another are examples of how we use this kind of transportation. In the place where I live, public transportation is a bad choice to travel from one place to another, therefore the use of automobiles as a personal way to transport are very used. I dare to say we depend on this kind of transportation;we depend of its comfort and its privacy. Secondly, in addition car plays an important role in our nation, the increase use of cars have resulted in increase of air pollution. This consequence results in the increase of respiratory diseases as well as the loss of healthy ecosystem. The importance of air pollution is high throughout the world and people try to find a way to reduce this in this “water car” would be a precursor of this important trend. Lastly beyond the importance of cars in every day of life and also the fact that the increase use of cars have resulted in the increase of air pollution, I strongly believe that “water cars” would be an important innovation difficult to resist, this due to the fact that water is deeply cheaper than fossil fuel are. In a beginning “water cars” may be more expensive, but it would be an important investment for our lives, just imagine how cheap it will be to travel from one place to another like from Ogun state to Abuja using this kind of transportation. And finally, it would be called water car and importance of water car are: firstly they make use of water not fossil fuel, gasoline or natural gas and secondly they can be a small water tank in case there is any fire on the roof of the car, it can extinguish the fire, thirdly water are deeply cheaper than fossil fuel, natural gas or gasoline. Lastly, they can even transport from one place to another because water are cheaper than fossil fuel. To sum up, I strongly believe this invention would be a turning point in the way we see transportation, this will bring with itself a lot of benefits for our nation such as the reduction in market products and it cost.**
