ESSAY WRITING

Topic: “If I Could Invent Something New”

My name is Eberechi Abundance Chiemena. I am 13 years old. If I could invent something new, I would love to invent a teleportation device.

A teleportation device is a device that transfers objects, information and other things from one place to another. Teleportation is one of the Frankenstein technologies that inspires and amazes us. Teleportation was brought about by Peres and five other researchers in the year 1993 which slowly brought about Quantum teleportation. The quantum teleportation has to do with two distant entangled particles in which the state of a third particle instantly teleports itself to the two entangled particles. By utilizing the low earth orbit micilins satellite, scientists have been able to teleport information over distances exceeding 1200km.

In order for you to teleport something,

Firstly, you will need to make a wormhole by building a capacitor with a large enough hole in the center to fit anything inside. Activate your power supply and charge your capacitor.

Secondly, you need to make a photon by using a star within your universe to help you understand how this time travel works. The star is helping you to release energy in the form of wave particle photons.

Thirdly, when two photons interact with one another and become entangled, the temporal effect is a volume of time expanding between the two photons. This is called Entanglement.

Lastly, trap two entangled photons with a distance between them, one where you begin and one where the object will transport to. Now activate your capacitor to compress space across the time between the two photons. We the steps you have successfully teleported an object. Now we are not free to transport a human being, the wormhole should be larger in order for a human to pass through. With these steps, you have successfully transported a human and an object.

With a teleporting device, the stress of humans getting a taxi will be less. It will also reduce cost of transportation and the cost of buying fuel and diesel.
