Essay: IF I COULD INVENT SOMETHING NEW

Imagine a world where your belongings effortlessly shrink into a compact button at your command. This is my dream. I am Terver Orkar Ebenezer, and if I could invent something new, it would be the "SUCKER TANK," or "S.TANK" for short—an innovative device designed to revolutionize how we store, transport, and protect our belongings. Unlike traditional solutions, the S.TANK seamlessly integrates with items such as clothing, luggage, cars, and furniture, promising unprecedented convenience and security for our modern lifestyles.

The S.TANK is compact, measuring 11cm long and 6cm wide in capsule form, and a mere 5cm long and 2cm wide in button form, making it both portable and discreet. Activating the device is as simple as tapping a button, instantly transforming it into a secure storage unit for your possessions. Crucially, the S.TANK remains operational until manually deactivated, incorporating advanced security features such as voice recognition and fingerprint scanning to prevent unauthorized access and theft.

Using the S.TANK is straightforward. Each device comes in different sizes tailored to specific needs, ensuring flexibility in what you can store. Upon purchase, a built-in microchip allows seamless registration with your phone or laptop, enabling you to track its location and manage settings. The device boasts a long-lasting battery, eliminating the need for frequent recharging and ensuring reliable performance for extended periods.

While the S.TANK offers unprecedented convenience, certain concerns may arise in the heart of users. Users might worry about losing the device, its cost, storage capacity, or network requirements. However, these challenges have been anticipated and addressed through thoughtful design: I have sat in the design room to figure out how to eliminate these potential concerns that may arise:

- **Loss Prevention:** Each S.TANK comes with a dedicated case or bag for safekeeping when not in use, minimizing the risk of misplacement. It is essential the device is registered to prevent loss
- **Affordability:** The financial cost of the S.TANK is comparable to that of a high-quality suitcase or bag, ensuring accessibility without financial burden.
- **Storage Capacity:** The device's specifications clearly indicate its storage capabilities, accommodating various items based on the model purchased. It can take cars, clothes, fridge, freezer etc.
- **Network Connectivity:** Operating on advanced 7G technology, the S.TANK seamlessly integrates with existing networks, providing robust connectivity wherever you go. You can't beat this.

In conclusion, the S.TANK represents a leap forward in storage technology, promising to enhance efficiency and security in managing personal belongings. By leveraging cutting-edge features and addressing practical concerns, it aims to redefine everyday convenience. As its inventor, I am confident that the S.TANK will not only meet but exceed the expectations of modern society, offering a practical solution to age-old storage challenges. Say goodbye to the

days of dragging luggage here and there especially when relocating—welcome to a future of streamlined simplicity and bliss.
