

IF I COULD INVENT SOMETHING NEW

If I could invent something new it would be a wristwatch that could detect diseases and know the cure for them and where to get it. It is to prevent the spread of diseases and to cure them quickly.

The wristwatch will be able to detect diseases. If you are to get a disease it will alert you some days before you do. And tell you the name of the disease. If you are supposed to get an infection from at a toilet seat. It will say don't use this toilet you get an infection and it will tell you the intensity and the name. If you are ignorant and still go ahead then when you get it will tell you the cure and the closest place to get it and how long it will take before the infection kills you.

Therefore, I hope to invent it so that it will be able to save lives and be careful of dirty areas and make people to get their homes cleaned up and it will be at affordable price for easy access. I hope with God's help this project will be able to be created and save many lives and make earth a better place.

Thank you.
