

IF I COULD INVENT SOMETHING NEW.

If I could invent something new, I will like to invent "Our thoughts/mind machine".

Firstly what is a machine? A machine is a piece of equipment with many parts that work together to perform a particular task easily. "Our thoughts/mind machine" will be a machine that will express the thoughts of a dumb person to others and also express others thoughts to them.

We are in a society that we have numbers of dumb people. This individuals are humans just like us, who will like to voice out and express their feelings and sometimes they want to respond to people but because of their inability to do such things, lack of interpreters to explain to others what they think also, not being able to understand what people are saying. And because of these problems, they feel down cast, not being able to fit in the ways of the society e.t.c. because of these problems I will like to invent the machine called "Our thoughts/mind machine" which will help the dumb to express themselves exactly the way they feel by voicing their feelings out.

"Our thoughts/mind machine" have only two functions which are 1.It extracts important information from the cerebrum which is the largest and frontal part of the brain that consist of higher mental functions such as thoughts, reasons, emotions and memory through the optic pathway using invasive imaging techniques and when it receives the information it will speak out the mind of the dumb to the hearing of other people around. 2.it also take In words or speech voiced out by others and it will interpret it to the understanding of a dumb person. Through these functions you will find out that this machine has created another way of communication.

This machine has some benefits to a human that has an inability to talk. They are; it reduces unfair treatment by the society because this machine will make them behave like someone who is not disabled. It helps them in expressing their minds. It also makes them feel encouraged cause their minds will be voiced out, to the extent that we will be proud to let them represent us in a meeting. They will be able to fulfill their dreams, why I say this is because everyone has a dream so automatically a dumb person also has something that needs to be fulfilled. But because they can't speak out, they think that, this reason is enough for them to give up their ambition. But if I invent this machine their spirit will be lifted up and one day their dreams will come to reality.

In conclusion I'm certain that this idea will go a long way in helping a dumb person.
