

IF I COULD INVENT SOMETHING NEW.

If I had the chance to invent something, I would have *liked to* invent a flying car. A flying car that is not using petrol nor fuel.

A flying car that everyone is going to benefit from it, the flying car would be such that can fly from one place to another.

The rate at which petrol is expensive is alarming, even our economy is such that there is fuel scarcity almost every time.

For instance, the cost of fuel in our country is seven hundred naira per litre (#700) and it is not enough to work up to an hour not to talk of being enough to carry out our works on a daily basis.

In essence, if I made a flying car, it will be more easier for people to carry out their daily tasks effectively, even business men and women get to their place of work in time.

As recorded, In the olden days, history has it that animals are used as means of transportation. Animals, such as Camel, donkey, horse etc. Civilization led to the use of bicycles then to the use of cars before jets and other aircrafts.

The flying car I would invent will be modernized and it will be of great merit to individuals, society and the country at large.

It is likely or possible to be known all over the world. This will enable and ensure the economic growth of the Nation.

Furthermore, it will be of great value to the Country as well; it will also make one gets to his or her place of work in time, because it is a flying car and even the rate of accident will reduce drastically.

Moreover I would like my invention to be more efficient in educational aspects especially for those that their house are far from school and also encourage young minds and students to make things that is going to be useful to the world in other words, to be creative.

Politically, my invention will let our leaders to invest so much into students with love of knowledge and in turns help them to think and achieve their plans.

My invention is going to be very helpful to everyone irrespective of the trade they are into.
