#### *"If I could invent something new"*

*Invention is the act of creating something. Invention can also be defined as a process or device that has been invented to proffer solutions or solve problems in the society. With this creative abilities of mine, I thought of something extraordinary I would love to invent and join other inventors like Alessandro Volta who made the electric battery, Alexander Graham Bell who made the telephone, William Congreve who made the military rocket etc. They all used their creative ideas and thought of something new and made what benefited the society.*

*If I could invent something new, I would make a beautiful shoe that changes colours when operated. This invention, which I'll call "Digital shoes" will have a button on it that when pressed will change colour to any colour of your choice. It will have the ability to change colours on command.*

*The digital shoes will look like a normal shoe but with a button, the only difference will be that it has the ability to change colours. To use it, you will press the button beside the shoelace and change to the desired colour.*

*The digital shoes will have different colours one can choose from with the help of the button on the shoe. The button won't be too big or noticeable but will be small and fashionable so people can like the shoe. Of course the shoe will have different sizes, because the sizes of the human legs varies.*

*The digital shoes will help economically to reduce the way people buy different colours of shoe at a very high price. Having three pairs of different designs of digital shoes is enough for a person no matter how fashion crazy the person may be. Each colour of cloth one wears can be matched with the colours in the digital shoes.*

*It is cheaper to buy three pairs of different specs of my digital shoes than to overcrowd your house with different types of shoes thereby causing economic waste. Someone*

*who has this type of shoe won't really have to buy much shoes because it can change colours and last longer than the conventional shoes.*

*In conclusion, there is a hidden tiny cable that makes the shoe to change colours which is powered by a little battery. There is a saying that "Everything that has an advantage also has disadvantage". The only disadvantage of the digital shoe is that you can't wash it with water but can clean it with the use of a damp piece of cloth. The digital shoes is a work of my creative ability.*
