

Name; Blessing Henry jss 2

I C S S BAUCHI, BAUCHI STATE

IF I COULD INVENT SOMETHING NEW.

If I were to invent something, I would invent a device that cleans gutter, how to invent a device that clears out gutter, firstly you would cut two lengths of pipe, cut two 6-inch lengths of pipe from the 10 -foot section with your saw or cutlass, then glue the short sections, next step is to join the other elbow, then connect the long piece, then attach a hose adapter, finally clean the gutter. The reason of this invention is to reduce the gathering of waste in gutters. I hope you like this invention.

The next invention I would like to practice is creating a teleport device the steps are your conductive material into two large plates with a hole in the middle cut to your liking.

Trace the same shape onto your dielectric material and cut that out. Sandwich your dielectric between your two conducting plate and insulate the hole in the center to avoid electric shock when you begin sending things through. I am by name Blessing Henry and there is other project such as a device that generates energy from rain fall, things searching device etc. that I would like to invent.
