

If I could invent something

My name is Olarewaju, Rihanna I am eleven years old I am in grade (7) the name of my school is Fort Worth Elite School.

If I could invent something that will make the world a better place, I would like to invent a smartwatch that can detect disease.

A **smartwatch** is a device in the form of a wristwatch.

Detect is something to is no longer active or effective.

Disease is a serious infection that happens when you are not careful.

There are different types of diseases which are, infectious diseases, deficiency diseases, hereditary diseases, and physiology diseases.

I would like to invent a smartwatch that can detect diseases.

How can a smartwatch that can detect disease?

It works by collecting data from individual sensors, such as heart rate and skin temperature, to detect changes in physiological signals.

How to make a smartwatch that can detect disease and the machine.

Firstly, I need a smartwatch and I need each machine for blood pressure HIV, etc. After that, I will need oxygen, then I will have everything together and it will give me a smartwatch that can detect disease.

The reason why I want to invent this is that a lot of people are dying because of diseases like COVID-19, HIV, cholera, blood pressure. I do not want people to die because of this again.

A scientist has created a device straight out of Star Trek that can detect all diseases,

Including (8) different types of diseases like cancer, just from breath. The *tricorder little Na-nose* can spot the chemical signature of the disease and it's hoped it will revolutionize the treatment of many dangerous illnesses by spreading convenient early detection technology.

The smartwatch can detect disease like wearable health devices can detect illness before you develop symptoms, a new study finds.

A smart wristband was able to pick up illness by up to 90%.

This smartwatch will reduce the doctors' work. In the hospital, a lot of people are dying and

drugs are expensive and hospital bills are also expensive. So if there is a smartwatch that can detect disease everything will be reduced, hospital bills will not be expensive and the governors are also trying their best so that people will not die.

I wish my dream come true of a smartwatch that can detect disease in Jesus' name amen
