

IF I COULD INVENT SOMETHING NEW

Imagine a world where you can control technology with your mind, no need to type, swipe or even speak, just think and it happens. This is the promise of the 22nd century INSIGHT MINDSET TECHNOLOGY. A technology that has the potential to renovate the way we interact with the world us.

IMT's use sensors detect brain activity and translate and I am sure with this device/sensor will show remarkable progress with people controlling device with their minds and even reducing the rate of crime and regaining independence.

It will have the length of 7cm with breath of 1 cm having two buttons by the side indicating ON and OFF. On top of the sensor is a screen which bears a tiny bulb that flashes blue or when turned on having a solar panel at the base. As mask has once said in the past that the less invasive link devices is implanted through the skull so , the reason for inventing this sensor is to minimize the rate of crimes committed, hence reduce corruption in the government, enhancing cognitive abilities like some people will use IMT's to create music or write texts using their brain signals,

If the device is being placed in supermarket, police stations, fuel station and other public places. It would be able to detect criminals without stress, help to spot that electorate who are not ready or willing to be responsible or respect the citizen when they are elected. This device will be held by an individual who when points it at the suspect, a blue light indicator will show through the suspect skin as a signal and goes straight to the heart which send a signal to the brain to read out everything going on in the suspect mind. Furthermore it will be connected by a universal series to a host which gives the out the information in words in the APP made for it.

Everything has demerit and so if the sensor should be used by anybody or sold in stall or public places.

The potential applications of IMT's are vast. It enhances productivity assist in technology health care and even gaming it ensures data security. To upgrade usability and accessibility, enhancement multimodal interface and many more.

IMT's a game changer allowing them to communicate with the world which in ways previously impossible.

In conclusion, INSIGHT MINDSET TECHNOLOGY represents a significant technology interactive while the potential benefits of IMT's make them a promising development in the field of technology and around the world.
