

IF I COULD INVENT SOMETHING NEW

If I had a chance to invent something new which would be very beneficial to mankind, it would be an anti-aging machine that will keep our loved ones strong and alive forever. People do tell me how rich, generous, kind and strong my great grand father was and how beautiful my great grandmother was too, but it is quite unfortunate that I didn't meet any of them. The heartbreak gotten from losing a loved one to the cold hands of death is irrevocable, that's why I would like to invent an anti-aging machine that will keep them alive forever.

Firstly, my invention would help children who wasn't opportune to see their parents especially the orphans to feel what motherly and fatherly love looks like and some mothers who die during Childbirth or fathers who die while the wife is still pregnant with their child to be alive and train their child/children.

Secondly, in the result of this invention, there will be relief and happiness in life of families, being the first grandchild of my grandparents I remember vividly how my grand father used to treat me with so much love and care providing for me everything i wanted but

suddenly grandfather died while my mother was pregnant with my sister which led to complications during her delivery and high blood pressure which she suffered leaving me heartbroken and shattered till now. If only I can have my machine invented my grand father will still be with us strong and active and my mother's health will be intact.

Thirdly, with my invention, some children will achieve their goals in life. I have seen so many children who have dropped out of school because of the death of their parents which made them to involve in a lot of social vices like robbery, cybercrimes, drugs because nobody to train them or put them through the right living attributes and see them through school.

Finally, I would love to invent the anti-aging machine for my wellbeing as well because I cannot imagine waking up one day to hear that my father or mother is dead without me seeing them again. It will put my mental health at risk. I still wonder how couples who love and cherish themselves so much with great so much dreams for their children will one day leave them behind and die, leaving their partner behind with perpetual pains and agony, that is why some partner dies after a short because of their inability to bear the pains. In

conclusion, with my invention I would love to change the painful experience people go through when they lose their loved ones and make them live forever.
